Accessibility should be the default, not an afterthought. For this reason, I have chosen to use [Atkinson Hyperlegible](#) as the font for this document. The font was specially designed to help people with low vision and has undergone many iterations, always improving the experience for people with vision impairment and people who enjoy pretty fonts. For people who want to look into helping people with processing disorders like dyslexia, look into the research-driven, open-source project [Open Dyslexic](#).
